Our 60th Anniversary 1946-2006

when only perfection will do

Founders

2nd Anniversary, 1948 The Broyhill Company, Dakota City

Office and plant expansion on the north side of the facilities was built in the mid 1950's.

Roy and Arline Broyhill founded The Broyhill Company in March, 1946, when Sherwin-Williams, a paint company, introduced the first 2,4-D weed spray. Roy's father had a general store in Dakota City selling Sherwin-Williams paint products and offered the new 2,4-D.

Roy jumped on the new product's potential and sold it to county agents, who introduced it to farmers. A hand sprayer was the only sprayer available back then and Roy started developing larger sprayers for jeeps, trucks and airplanes.

The original company was located at 711 Pearl Street in Sioux City, Iowa, before locating to Dakota City, Nebraska. Construction on the first Dakota City building started March, 1948, and was completed June 1, 1948. This 40 x 80 foot building employed six people.

Through the years, the company has grown with one building expansion completed in December, 1992, which included a new assembly-shipping building, powered paint conveyor, water based paint facilities and infrared paint curing ovens. This expansion allowed painting with either oil or water based paint and consolidated and increased the assembly area by 10,000 square feet.

In the 1960's, The Broyhill Company broadened its market base by adding turf spraying equipment for golf courses, parks and municipalities.

In 2000, the company expanded into the turf vehicle industry with the purchase of a Wisconsin firm that produced work vehicles and turf related products. The purchase expanded our line to include two 3-wheel vehicles, a four wheel vehicle, greens brush and turf spiker/roller.

The newest expansion was in the later part of 2002, with the start of the Fleet Broyhill LLC facility. This facility produces line marking paint in Dakota City for the sport field market. Soccer and football facilities use the exceptional line paint all over the USA. The joint venture was created with Fleet LTD of Malvern, England, a quality paint manufacturer.

Addition of a sod and sand trap in August, 2004, gave the company a place to test golf course accessories and a natural background for equipment photos.

when only perfection will do

We would like to take this opportunity to say thank you for sharing our 60th anniversary open house. It has been through dedicated associations with suppliers, employees, community and the industry that has made this milestone a reality.

Craig G. Broyhill

Broyhill

when only perfection will do

Today, Broyhill continues to maintain a complete manufacturing facility, including Engineering, Prototype, Production, Sales, Marketing, Customer Service, Parts, Shipping and Accounting.

In addition to a modern painting facility and efficiency planned assembly areas, welding and fabrication equipment include mig, tig and robotic welders, press brakes, punch presses, 3/8 shears, iron workers, tube benders, lathes, drill presses, plasma cutting and much more.
